Safety Requirements Based on Weather Conditions and Trail Difficulty

Safety during a hike depends on both the right equipment and the complexity of the trail and weather conditions. In rainy or wet conditions, using **trekking poles** can help maintain stability and balance on slippery surfaces. Poles are also beneficial for long-distance hikes.

Forecasting weather and regularly checking conditions is essential to avoid unexpected situations. Utilizing reliable weather forecasting apps, such as **Windy**, **AccuWeather**, or **YR.no**, can provide detailed weather updates. Another valuable resource is online webcams, which offer real-time insights into conditions along the route.

When planning hikes along coastlines or rivers, it's important to monitor water level changes. For this purpose, the **Tides app** provides accurate information about tides and currents. The **Sun and Moon app** is also helpful for weather forecasting and route planning, as it provides information about sunrise and sunset times. This app is especially useful when planning hikes in areas where knowing the onset of twilight or complete darkness is critical, such as in mountainous or forested trails. It aids in better pacing the hike and selecting suitable spots for breaks or overnight stays to avoid unpleasant situations when darkness suddenly falls.

If an adult, like a teacher, parent, or guardian, is leading the hike, they should download and use these apps, since some may not be available for kids under 13. It's crucial for this adult to show the young hikers how to use the apps and explain their features, so they can learn to check the weather forecasts on their own and adapt to changing conditions in the future.

2.4 Meal and Activity Planning

During a hike, it's essential to ensure there's enough food and water, as well as to include educational activities and plan breaks that help boost team spirit and keep participants energized.

Meal and Water Consumption Planning During the Hike

Nutrition and hydration are key factors for maintaining participants' energy and well-being while hiking. Meals should be planned to be portable, nutritious, and suitable for outdoor consumption. Here are some commonly useful food items for hikes:

- **High-energy snacks:** Nuts, dried fruits, energy bars, and cookies are great options.
- **Easily transportable foods:** Whole grain snacks with cheese, meats, hard-boiled eggs, tofu, or other protein sources, as well as sturdy fruits and vegetables that won't get squished in a bag.
- **Dehydrated meals:** These are particularly useful for multi-day hikes. They're available at specialized outdoor shops, are lightweight, and can be quickly prepared by adding hot water.

Staying hydrated is very important, especially in hot weather or during intense physical activity. It's recommended to plan for at least **1.5 to 2 liters of water** per participant per day. If there are water refill stations or natural water sources along the route, you can plan to replenish supplies along the way. However, it's crucial to verify the water's cleanliness beforehand or bring along **water filters or purification tablets**, which can be found at outdoor stores.

6

Integrating Activities and Learning During the Hike

Going on a hike can be a valuable part of the learning process, enhancing young people's practical knowledge and teamwork skills. Activities can be designed to connect with subjects like science, geography, biology, or orienteering skills. Here are some ideas:

- **Orienteering challenges:** Assign each participant a task to locate specific points along the trail using a map and compass. This encourages navigation skills and teamwork.
- **Nature exploration:** Engage participants in identifying and learning about local plants or animals encountered along the way. For example, they can explore forest habitats and practice recognizing different tree and plant species.
- **Ecology lessons:** Incorporate topics on sustainability and waste reduction, teaching participants the principle of "leave no trace." This fosters an understanding of conservation and environmental protection while they enjoy the outdoors.

Rest Breaks During the Hike

Rest breaks during a hike are not only important for physical recovery but also for fostering teamwork and building stronger relationships among participants. It's recommended to plan **regular breaks every 1 to 1.5 hours**, especially on longer routes, so participants can rest, enjoy snacks, and hydrate. For example, during a 12 km hike, there could be two longer breaks and several shorter, 5-10 minute pauses. To make these breaks more meaningful, consider incorporating activities that promote cooperation and communication, such as

- **Team-building games:** For example, the "knot game," where participants form a circle, hold hands, and try to untangle themselves without breaking the chain, encourages problem-solving and teamwork.
- **Campfire conversation:** These moments can strengthen bonds between participants and offer a time for reflection on the day's experiences and lessons learned.
- **Shared meal preparation:** Whether it's making sandwiches, grilling vegetables, or roasting sausages over a campfire, preparing food together creates a positive and friendly atmosphere that strengthens relationships.
- **Feedback circle:** Each participant can share their thoughts on what they enjoyed, what challenges they faced, and what they learned. This activity encourages reflection and provides valuable insights for improving future hikes.

It's also necessary to give participants free time to simply enjoy nature without any planned activities. They can take in the scenery, listen to nature's sounds, or engage in personal conversations. This balance between structured activities and relaxation ensures that the hike becomes a well-rounded experience, offering both education and leisure.

3. Piloting

A pilot test is a small-scale trial conducted to evaluate ideas or methods before broader implementation. It helps identify potential improvements or risks and assess how successfully the project might operate in the future. As part of this project, a pilot test was carried out with the active involvement of the administration of **Laurencia Primary School**, who showed interest in engaging students in organizing hikes.

7

3.1 Hike with Laurencia School Students

In collaboration with the **Laurencia Primary School** science teacher, an online meeting in the form of a webinar was organized on April 17, 2024, with 6th-grade students. During this session, they learned the skills needed to organize self-guided hikes. The presentation was prepared by the head of organization "Movement Spontaneous" Matijs Bahens.

Photos from online meeting and presentation for students

The presentation covered hiking planning methods, focusing on key topics:

- Route analysis and map reading
- Event management plan and navigation
- Weather conditions and equipment selection
- Meal and activity planning

8

Photo capture of the presentation slides

After the webinar, the class was given the following tasks:

1. Select a group leader, a deputy, and three additional individuals to be trained in using radios and added to the organizers' WhatsApp group
2. Prepare a route plan and a GPX file for the participants
3. Create a registration form, along with a list of equipment, clothing, and a time schedule

Recommended activities for the hike:

- An introductory and briefing circle
- Breaks and a lunch stop
- A feedback circle at the end of the hike

The student group chose one of the Baltic Forest Trail sections – No. 5 Sigulda-Ligatne [see Appendix 1], slightly shortening the final part of the route. Since the students are very active and athletic, they opted for a relatively long section. It's important to assess one's physical fitness during a hike, but also not to underestimate one's abilities.

The pilot hike took place on May 22, 2024, with 26 participants: 19 students, the science teacher, two parents, three representatives from "Movement Spontaneous" organization, and one representative from "Latvian Celadita" organization. At the start of the hike, a briefing was conducted [see Appendix 2], and the most active participants were given radios to relay information about rest breaks, the remaining distance, or to communicate in case of an emergency. Some students had printed maps from **Baltictrails.eu**, while representatives from "Movement Spontaneous" used the GPX files available on the website via smart devices to ensure the correct route in case of uncertainties.

The trail was well-marked with the Forest Trail signage (white-orange-white) and informational stands. [see Appendix 2] Along the way, several stops were made to share interesting facts about Forest Trail and the surrounding nature, as well as to rest and hydrate, because the day was particularly hot. After approximately 10 kilometers, a longer lunch break was organized, during which the students enjoyed healthy snacks and learned more about preparing food for hikes [see Appendix 2].

After the break, there were about 10 kilometers left to hike through Gauja Valley. Some students took the opportunity to capture beautiful photos with Andra, a photographer from "Movement Spontaneous". The hike concluded at a parking lot with a rest area, where a feedback circle was held. Each participant had the chance to share what they enjoyed most and what they found most challenging.

3.2 Piloting Feedback and Improvements

After the pilot hike, feedback was collected, providing valuable insights for planning and organizing future hikes. Based on the experiences of all participants, several improvements were identified that would help make the organization and management of future hikes more efficient.

Student Feedback

Participants enjoyed:

9

5. **Integrating hikes into the learning process:** Hikes not only promote physical activity and teamwork among students but also offer educational opportunities across various subjects. For example, science lessons can be integrated into hikes by teaching about the environment and navigation in a practical way. History lessons could also become more engaging by organizing hikes to culturally or historically significant sites, where students can learn about events in history. Additionally, incorporating such activities during project weeks ensures they do not interfere with regular lesson plans or students' holidays, while offering a meaningful and educational alternative to traditional teaching methods. This fosters closer collaboration between teachers and students, developing teamwork and organizational skills.

4. Recommendations and Resources

This section compiles recommendations and resources that will help anyone plan and organize successful hikes, based on the information gathered in the guidelines. Online tools and platforms are provided to facilitate route selection, navigation, and safety measures.

4.1. Recommendations

- Plan the hike carefully, considering the difficulty level of the route, trail conditions, and weather forecasts.
- Check the weather regularly:
- Inform a family member about your planned route and expected return time.
- Familiarize yourself with trail markings and signs to stay on track.
- Dress in layers, choose durable hiking shoes, and protect yourself from the sun with SPF cream, a hat, and sunglasses.
- Ensure you have enough water and food.
- Take regular breaks and listen to your body's signals.
- Be alert and watch your surroundings, especially for unstable terrain, wildlife, and changing weather conditions.
- Stay on the chosen trail and avoid unknown or restricted areas.
- If you encounter wildlife, maintain a safe distance and do not create stress for them.
- If hiking in a group, maintain visibility with each other and communicate regularly.
- Follow the principle of "Leave no trace," respecting nature and minimizing your impact on the environment.

4.2. Useful Resources

- **Webinar** on conducting self-guided hikes (in Latvian): <https://youtu.be/VoEhc2cgNH4>
- **Educational film** made within this project summarizing these guidelines: <https://youtu.be/26fscs8f9w>
- **Coastal Trail and Forest Trail** hiking routes and information: <https://baltictrails.eu/iv/>
- **Google MyMaps** allows you to customize maps by marking routes, travel points, and adding annotations: <https://mymaps.google.com>
- **Strava** is a popular app that allows you to track your hiking routes and share achievements

ONLINE TOOL GUIDELINES

Practical hints for hikers on how to use the online solutions (weather stations, web cameras, and platforms etc.) for planning a safe hike. (Draft -

<https://docs.google.com/document/d/1djZnZCl47q6HqLtIG0KWjnC4FTupocYSdp0du4OFST8/edit?tab=t.0#heading=h.69j8v362ynpw>)

Accessible Hiking Guidelines for using Online Tools, 2025

Within project "Accessible Hiking Trails"

By NGO "Movement Spontaneous"

Introduction

The Accessible Hiking Trails initiative aims to enhance hiking safety and accessibility by using online tools and digital solutions. Digital platforms provide real-time information, improve route planning, and ensure safe navigation in diverse terrain and weather conditions.

These guidelines help hikers, tourism organizers, and outdoor groups integrate digital resources into their hiking experience, covering:

- Weather forecasts and emergency alerts.
- GPS tracking and navigation apps.
- Digital trail databases and community platforms.
- Real-time information from webcams and local reports.
- Online tools for group coordination and communication.

By using these solutions, hikers can avoid risks, improve preparation, and enjoy safer, more inclusive hikes.

1. Packing and Equipment with Digital Support

Carrying the right gear is crucial for comfort and safety. Online resources help organize packing lists, find gear recommendations, and avoid overpacking or missing essentials.

Best Online Packing List Tools

- Interactive Checklists:
 -  **Trello Boards** – A project management tool that helps organize hiking plans, gear lists, and trip details with customizable boards. **How to use:** Create a board, add checklists, and track progress. <https://trello.com/>
 -  **PackPoint** – A packing list app that suggests what to bring based on your destination, weather, and activities. **How to use:** Enter your trip details, and it generates a customized list. <https://www.packpoint.com/>
 -  **Trail Wallet** – A budgeting app for tracking hiking and travel expenses. **How to use:** Add expenses manually and categorize them for budgeting. <http://trailwallet.io/>

1

-  **Baltictrails.eu** – A website providing official Baltic hiking trail maps and information. **How to use:** Browse trail routes, download maps. <https://baltictrails.eu/>
-  **Komoot** – A hiking and biking route planner with offline maps. **How to use:** Plan a route, download maps for offline use, and track your progress. <https://www.komoot.com/>
-  **AllTrails** – A database of hiking routes with user reviews and GPS tracking. **How to use:** Search for specific trails, download GPX file, and track your hike. <https://www.alltrails.com/>
- GPS Navigation Apps:
 -  **Strava** – A fitness tracking app that allows hikers, runners, and cyclists to record their routes, monitor performance, and share achievements with others. **How to use:** Download the app, start recording your hike, and track your distance, elevation, and time. You can also analyze stats and share your routes with the Strava community. <https://www.strava.com/>
 -  **Google MyMaps** – A tool for creating custom hiking maps. **How to use:** Mark waypoints, add notes, and share your route. <https://www.google.com/mymaps>
 -  **Outdoor Active** – A navigation app with hiking, biking, and outdoor sports maps. **How to use:** Plan and follow GPS routes. <https://www.outdooractive.com/>
 -  **Locus Map** – A GPS mapping app for offline navigation and live tracking. **How to use:** Download maps, track routes, and record hikes. <https://www.locusmap.app/>
 -  **Mapbox** – A customizable mapping platform for navigation apps. **How to use:** Developers can integrate maps into their hiking applications. <https://www.mapbox.com/>
 -  **Maps.me** – An offline map app for detailed hiking trails and city navigation. **How to use:** Download maps for offline use and navigate without internet. <https://maps.me/>

Practical Tips

- Download GPX file maps beforehand to use them offline in case of weak signal areas.
- Use live tracking to share location with a trusted contact.
- Mark waypoints such as water sources or shelters for safety.

5. Platforms for Trail Updates

Trail conditions change due to weather, maintenance, or natural hazards. Checking online updates reduces risks and helps in planning.

Best Online Resources for Trail Updates

- Webcams: Live views from national parks or hiking areas.
- Hiker Communities: Facebook Groups, Reddit, local forums.
- National Park and Tourism Websites: Official updates on closures, permits, and advisories.
- Apps with hiker-reported issues: **Komoot**.

Practical Tips

- Check webcams before leaving to assess trail visibility.

4

-  **LighterPack** – A minimalist packing list tool that helps hikers track the weight of their gear. **How to use:** Add items to your list, and it calculates the approximate total pack weight. <https://lighterpack.com/>
- Hiking Gear Reviews: YouTube channels, outdoor blogs, Reddit forums.
- Rental and Second-Hand Gear Platforms:
 -  **Facebook Marketplace & Local Outdoor Rental Services** – Platforms for buying, selling, or renting hiking gear. **How to use:** Search for hiking equipment in your area, filter results, and contact sellers or renters. <https://www.facebook.com/marketplace>
 -  **Local Outdoor Rental Services** – Platforms that allow hikers to rent outdoor gear instead of purchasing it, making hiking more accessible and cost-effective. **How to use:** Visit the website, browse available gear, check rental terms, and book equipment for your hike. [Gaudas in Latvia](#), [Hiking in Estonia](#)

Practical Tips

- Use a digital checklist to avoid forgetting essentials.
- Check weather-based packing recommendations in apps to adjust gear.
- Find gear rental options online if you lack equipment.

Basic Digital Packing List

- Navigation: Smartphone or smart watch with GPS apps, power bank, printed backup map.
- Weather Protection: Waterproof jacket, layered clothing, UV protection.
- Safety Gear: First aid kit, whistle, flashlight, emergency blanket.
- Food & Water: Lightweight, energy-rich snacks, at least 2L of water, portable water filter.
- Emergency Items: Multi-tool, duct tape, fire starter, backup batteries.

2. Weather Conditions

Weather conditions significantly affect hiking safety. Sudden storms, temperature drops, or fog can make trails dangerous or impassable. Online weather tools help hikers plan accordingly and avoid hazardous situations.

Best Online Tools for Weather Monitoring

-  **National Weather Websites** – Official sources for country-specific weather forecasts and alerts. **How to use:** Search for your country's weather service and check conditions before your hike. https://videscents.lv/mc_lv/ for Latvia, <https://www.ilmateenistus.ee/> for Estonia.
-  **Global Forecast Apps:**
 - **Windy** – A detailed weather map with wind, precipitation, and temperature data. **How to use:** Search your location, view real-time maps. <https://www.windy.com/>
 - **MeteoBlue** – Forecasting app with weather models for hiking. **How to use:** Enter a location and check short-long-term forecasts. <https://www.meteoblue.com/>
 - **Yr.no** – Norwegian weather service with local forecasts. **How to use:** Search your location for weather updates. <https://www.yr.no/en>
 - **AccuWeather** – A weather app providing localized forecasts and severe weather alerts. **How to use:** Check your location's current and future weather. <https://www.accuweather.com/>

2

- Join local hiker groups for real-time reports.
- Report hazardous conditions to help other hikers.

6. Communication and Safety

Staying connected is essential, especially in remote areas. Online communication tools help groups stay organized, share updates, and respond to emergencies.

Best Online Communication Tools

- Group Chats:  **WhatsApp**, **Telegram**, **Signal** – Messaging apps for group coordination before and during hikes. **How to use:** Create a group chat, share updates, and enable location sharing. [WhatsApp](#), [Telegram](#), [Signal](#)
- Event Coordination:
 -  **Facebook Events** – A tool for organizing hiking events and inviting participants. **How to use:** Create an event, set details, and invite hikers. <https://www.facebook.com/events/>
 -  **Google Forms, Airtable** – Tools for collecting hiker preferences and organizing group details. **How to use:** Create a form to gather participant info or use Airtable to track plans. Google Forms: <https://forms.google.com/>, [Airtable](#): <https://www.airtable.com/>
- Emergency Location Tools:
 -  **What3Words** – A location tool that assigns three-word addresses to every spot on Earth. **How to use:** Enter a three-word code to find or share an exact location. <https://what3words.com/>
 -  **Google SOS Alerts** – Emergency notifications for disasters, road closures, and extreme weather. **How to use:** Enable notifications to receive alerts. <https://www.google.es/crisisresponse>
 - Offline GPS trackers

Practical Tips

- Create an online group chat for hike details, updates, and emergency contacts.
- Use online registration form for participant registration and preferences.
- Share real-time location using GPS apps.
- Save emergency numbers in your phone before the hike.
- Carry a power bank to keep devices charged.

7. Post-Hike Feedback and Data Tracking

Recording hike details helps improve future experiences and builds a hiking community.

Best Digital Feedback Tools

- Surveys: Google Forms, **Airtable**, **Typeform**.
- Route & Performance Tracking: Strava, **Komoot**, **Google Sheets**.
- Community Sharing: Facebook groups, hiking blogs, **Instagram**.

Practical Tips

- Create a post-hike survey to improve future events.

5

-  **Tides** – An app providing tide forecasts and water level data, essential for coastal hiking and planning around tidal changes. **How to use:** Select a location to view tide charts, high and low tide times, and real-time water conditions. [Tides](#)
-  **Sun and Moon** – A tool for tracking sunrise, sunset, moon phases, and daylight duration, useful for planning hikes with optimal lighting. **How to use:** Enter your location to see solar and lunar data, including golden hour and moonrise times. [Sun and Moon](#)

-  **Real-Time Alerts** – Local emergency services and government alert systems providing weather warnings. **How to use:** Enable notifications from national authorities for real-time updates.

What to Check Before the Hike

- Temperature, wind speed, precipitation, storm warnings.
- Long-term vs. short-term forecasts and their reliability.
- Interpreting weather data: How to read radar maps, precipitation charts, and wind forecasts.

Practical Tips

- Check multiple sources for accuracy before the hike.
- Use alerts and notifications for sudden weather changes.
- Plan alternative routes in case of adverse conditions.

3. Web Cameras for Real-Time Trail Conditions

Web cameras provide real-time visual updates on trail conditions, visibility, and congestion. This information is especially useful for determining whether a trail is safe and accessible before setting out.

Where to Find Them

-  **National Parks, Ski Resorts, and Nature Reserves** – Many official park websites offer live webcams covering popular hiking areas, helping hikers check real-time trail conditions. **How to use:** Visit the official website, select a webcam location, and view live images to assess weather, visibility, and trail congestion. [Latvia: allradio.Webcams](#), [Estonia: allradio.Webcams](#)
-  **Local Road Cameras** – Online road cameras help check real-time road conditions before departure, ensuring safe access to trailheads, especially in snowy or rainy seasons. **How to use:** Visit the official road authority website, select a camera location near your route, and review live footage for weather and traffic conditions. [Latvian State Roads Cameras](#), [Estonian Road Cameras](#)
-  **Community-Shared Camera Feeds** – Platforms like Windy and hiking forums provide access to live webcam feeds for lesser-known trails, helping hikers assess conditions before setting out. **How to use:** Visit the website, search for your desired location, and view available live camera feeds. [www.windy.com: Webcam](http://www.windy.com/Webcam)

Consider limitations such as delays in updates - some webcam images may not refresh frequently, so always double-check timestamps. It is also recommended to cross-reference webcam visuals with weather forecasts to get a more accurate and complete picture of current conditions.

4. Navigational Tools with GPS

Getting lost or misjudging the terrain is a common risk. GPS tools ensure safe navigation, prevent detours, and help track progress.

Best Online Navigation Tools

- Hiking Route (GPX file) Databases:

3

- Share trail insights on hiking forums.
- Analyze participation trends using Google Sheets or Strava analytics.

8. Final Safety Checklist

-  **Preparation:** Trello Boards, Google documents
-  **Weather Apps:** Windy, Yr.no, AccuWeather, Tides, Sun and Moon.

 **Webcams:** [National park](#) webcams, road cameras.

 **Navigation Apps:** Strava, Google **MyMaps**, Outdoor Active, **Komoot**, Locus Map, Map

box, Maps.me.

 **Emergency Services:** [What3Words](#), [Google SOS Alerts](#).

 **Communication:** WhatsApp, Signal, Telegram.

 **Trail Updates:** National park websites, **Komoot**, hiker forums.

Summary

Online tools have significantly enhanced hiking safety by providing essential information on weather, trail conditions, and navigation. By integrating these resources into their preparation, hikers can mitigate risks and maximize their outdoor adventures.

However, no digital tool can replace good judgment and preparedness. **Always carry essential gear, inform someone of your plans, and be ready to adapt if conditions change.** With the right combination of technology and common sense, hikers can safely explore the great outdoors with confidence.
